DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4, 8, and 26 are rejected under 35 U.S.C. 102(b) as being anticipated by Dotts et al.

Dotts et al teaches a system having a reusable orbital vehicle, a plurality of attachment positions, and experimental packages (the tiles) that are placed throughout the space shuttle.

Claims 1-4, 8, and 12-14 are rejected under 35 U.S.C. 102(b) as being anticipated by Cervisi et al.

Cervisi et al discloses a reentry vehicle having a skirt, experiment packages 110 (see figures 2, 4, and 6), and attachment positions.

Re claim 13, please note that any parts on the interior portion of the aft skirt can be broadly read as a protected attachment position. Please see the inside of today's interior portion of the aft skirt. Re claim 14, a screw or attachment members in the interior portion is well known in this day and age.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1, 5-7, 9-11, and 22-25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bridges et al in view of Dotts et al.

Bridges disclose a reusable orbital vehicle that has access panels (see figures 4-7) but is silent on the experimental packages. However, Dotts et al teaches that experimental packages and attachment positions are well known in the art.

It would have been obvious to one skilled in the art at the time the invention was made to have used experimental packages and attachment positions if Dotts on Bridges et al's system to protect the spacecraft and to know how the tiles operates in space, during reentry and during launch.

Re claim 7, please note that the carrier plate is 14 in Bridges et al.

Re claims 22-24, please note that sensors such as vibration sensors or temperature sensors and avionics data buses and data storage units are notoriously well known in this day and age.

The examiner takes official notice that these parts are well known.

Allowable Subject Matter

Claims 15-21 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Art Unit: 3644

Claims 27-36 are allowed.

Response to Arguments

In response to applicant's arguments that Dotts does not teaches attachment positions on the outer surface of the thermal tiles, the Examiner would like to point out that the claims do not call for this. The claims call for the attachment positions located on the outer skin surface of the orbital vehicle. Furthermore, Dotts does teach an "experimental package", which in this case is the tile. The tile attached to the shuttle can be used as an experiment since it can be examined once it lands. The use of the tiles as experimental packages is intended use. In response to the applicant's arguments on the Cervisi reference, the tiles are interpreted as experimental packages since they can be examined for data. The use of the tiles as experimental packages is intended use carries no patentable weight.

In response to applicant's argument that since the Bridges et al and Dotts et al references are different U.S. classifications, this argument is not convincing since Dotts et al teaches an element that can be combined with the system of Bridges et al to create an improved system.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE

MONTHS from the mailing date of this action. In the event a first reply is filed within TWO

MONTHS of the mailing date of this final action and the advisory action is not mailed until after

the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tien Dinh whose telephone number is 571-272-6899. The examiner can normally be reached on 9-6.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Teri Luu can be reached on 571-272-7045. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
